## A leader in the cleaning tools category for over 50 years

Scotch-Brite™ products offer quality, durability and performance. Through innovation and technology, 3M continues to develop efficient and cost-effective products for your cleaning needs.

In side-by-side same product comparisons, Scotch-Brite™ Hand Pads are more powerful than most competitive pads. Tests show they remove up to twice as much baked-on food from cookware and dishes.\* That means less time and effort are required to complete each cleaning operation. Look to the family of Scotch-Brite™ cleaning products for the right tool for each cleaning job — from heavily soiled griddles to the most delicate surfaces.

## Improve Food Consistency

Could you be losing business due to inconsistent food quality?

- Enhance your brand and reputation
- Assure your customer of consistent food quality on every visit

The 3M Oil Quality Test Strip is a simple test designed to measure the amount of free fatty acids (FFA – which includes trans-fat) within the oil.

- Easy to use, easy to read and eliminates guesswork
- Keeps all types of fried food quality high
- Helps save money by preventing premature disposal of shortening
- Works equally well in animal, vegetable or A/V blend shortenings

As oil breaks down, the concentration of FFA increases – affecting food taste and appearance.

## Usage Instructions:

1. Dip the strip into oil at operating temperature (163°C to 204°C)
2. Remove after 10 seconds.

3. The bands change color to indicate the degree of shortening breakdown.

4. Discard strip after recording the results as strip cannot be reused.

## Storage Instructions:

1. Store strips in a closed plastic container, in a cool and dry place (below 21°C). Refrigeration is recommended.
2. Oil Quality Test strips begin to change color on their own if it is stored at high temperature or exposed to air, thus resulting in inaccurate strip readings.

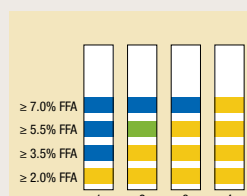

## Optimize Oil Usage and Related Costs Could you be changing your oil too soon?

- Preventing premature disposal of oil saves money
- Fewer oil changes increases workers' productivity
- Reducing oil waste minimizes environmental impact

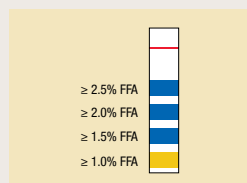

### What does the color change mean?

As a food operator, you can use the 3M Oil Quality Test Strips to determine the discard point for your oil.

### 3M™ Standard Range Oil Quality Test Strip

- 1 Indicates greater than 2% FFA concentration\*. Oil breakdown has begun.
- 2 Indicates greater than 3.5% FFA concentration\*. Check breaded food quality (color/taste particularly of chicken and fish). Discard oil if unacceptable.
- 3 Indicates greater than 5.5% FFA concentration\*. Check fried food quality (color/taste, particularly of chicken, fish and french fries) discard oil if unacceptable.
- 4 Indicates greater than 7% FFA concentration\*. Recommend discarding oil.

### Also available – 3M™ Low Range Oil Quality Test Strip

Works the same but used when a more precise reading of early degradation of oil is desired. This monitor strip measures FFA concentrations at 1%, 1.5%, 2% and 2.5% - ideal for food processing applications or to meet regulatory requirement.
